RE: Final Groundwater Data Package Submittal
Petroleum Release at Missile Alert Facility (MAF) F-1 (PL507)
Augusta, Lewis & Clark County, MT
Facility ID #50-09030 Release #1332

Dear Mr. Gestring:

EMR Environmental conducted remedial activities at MAF F-1 (PL507) located near Augusta, Lewis and Clark County, Montana, Facility ID #50-09030 Release #1332, between June 8, 2015 and August 20, 2015. The remedial activities were completed to accelerate the remedial process at the site. The corrective actions included the installation of ten remediation wells at the site (Figure 1), extracting groundwater from the wells and treating the water with granular activated carbon. The treated groundwater was temporarily stored in a plastic tank and RegenOx® Part A was added. The solution was then injected into each remediation well to increase the dissolved oxygen levels in the groundwater within the contaminant plume. Upon completion of the initial injections (June 9 to June 15, 2015), ORC Advanced® socks were placed in nine of the remediation wells and seven of the existing monitoring wells. The ORC socks were removed from the wells on April 10, 2016 and discarded. Between July 7, 2015 and July 9, 2015, a solution of Oil Spill Eater (OSEII) and surface water from the nearby Sun River was pressure injected into each remediation well. No groundwater extraction was completed prior to the OSEII injections. Remediation well RW-4 was destroyed on July 15, 2015 while excavating to repair a communication line that was damaged during the installation of RW-4. Because RW-4 was a dry well, a replacement well was not installed.

EMR has since completed 6 additional injection events at MAF F-1. Injections began August 13, 2015 and ended October 27, 2015. Each event was completed over a period of two (2) days. The events were completed using a mixture of OSEII® and surface water for each well. Surface water within the 400-gallon plastic tank was aerated prior to the addition of OSEII®. Each well was filled to near the top of the casing with the solution using a sump pump and discharge tubing.

On April 17, 2016 EMR conducted the third post-remediation groundwater sampling event at MAF F-1 to evaluate the effectiveness of RegenOx and OSEII applications conducted between June and October 2015. Analytical results from groundwater samples collected indicate that VPH and EPH compounds were present at concentrations exceeding the DEQ Tier 1 Risk Based Screening Levels (Appendix A). Additionally, free product was found in MW-12.

Based on the significant contaminant concentrations increases in MW-12, EMR conducted an additional soil investigation in the area near MW-12 and MW-9 to determine if subsurface soil contamination was missed during the RI phase. EMR advanced four (4) soil borings near MW-12 and two (2) soil borings near MW-9. Soil borings were advanced using an air rotary drill rig. EMR field screened all the soil samples collected from each boring for odors, visible staining and headspace testing with a MiniRae 2000 Photo Ionization Detector (PID). Soil sampling and field screening were completed at 5-feet intervals from 10 feet below ground surface (bgs) to the termination of the soil borings (38-40 feet bgs). A handheld container was used

to collect soil samples lifted from the borehole via injected air. Soil samples were immediately transferred from the container to sealable plastic bags for PID field screening. Soil samples were collected at each boring from the interval with the most elevated PID reading and/or evidence of contamination based on visual or olfactory indications and submitted for laboratory analysis. If there was no indication of contamination, then the samples from the soil/water interface were submitted for laboratory analysis. All soil samples were submitted to Eurofins Analytical and analyzed for VPH and EPH using the 2004 Montana Modified Massachusetts Method. Soil analytical results indicated no exceedances of the Tier 1 RBSLs.

On October 23, 2017 and October 24, 2017, EMR completed remedial activities along with groundwater monitoring well installation and sampling. EMR completed a groundwater extraction event at MW-12. Groundwater monitoring wells MW-14 and MW-15 were installed to assess contamination down gradient and cross-gradient from MW-12. EMR collected groundwater samples from MW-15 and MW-12 (post extraction event). MW-14 was dry.

Groundwater and Free Product Extraction

To mitigate the residual free product observed in MW-12, EMR subcontracted Boland Construction to complete a high efficiency vacuum extraction (HVE) event to remove free product, and impacted groundwater from the well. On October 23, 2017, a vacuum trailer unit equipped with 3000 CFM was utilized for the extraction event. To conduct liquid/vapor extraction, a 1-inch diameter PVC pipe was lowered into MW-12 and set just above the water table. A Fernco fitting was installed to seal the wells to allow for vapor extraction simultaneously with liquid recovery. A clear view port was equipped to the extraction hose to allow real-time viewing of the extracted liquids. The extraction continued for approximately 3 hours and no noticeable free product was observed in the extraction hose after the first two minutes of the HVE event. The extracted liquids (300 gallons of petroleum contaminated groundwater) were held in a storage tank for later disposal. MW-12 was gauged on October 24, 2017 and no free product was detected with the interface probe or observed in a bailer.

On December 12, 2017, Emerald Services pumped the water from the storage tank and transported the waste to their disposal facility in Great Falls, Montana.

Monitoring Well Installation

New monitoring wells MW-14 and MW-15 were installed on October 24, 2017 to assess groundwater conditions down gradient and cross gradient from MW-12. The wells were constructed using hollow stem augers equipped with 2-ft split spoon samplers. Well construction consisted of 20 feet of two-inch diameter slotted PVC screen (0.01-inch) from 15 to 35 feet bgs. Solid PVC riser was extended to just below land surface. Sand was placed to two feet bgs (1 foot above the wells screen) and a one-foot thick bentonite seal was placed above the sand and hydrated. The upper 1 foot of each borehole was completed with concrete pavement. The wells were secured with 8-inch diameter steel flush manways sealed in the new concrete pavement.

EMR field screened all the soil samples collected from each boring for odors, visible staining and headspace testing with a MiniRae 2000 Photo Ionization Detector (PID). Soil sampling and field screening were completed where possible. Below 15 feet bgs, the soil turns to sandstone, and sample collection was limited. Soil samples were collected at each boring from the interval with the most elevated PID reading and/or the soil/water interface and submitted for laboratory analysis. All soil samples were submitted to Eurofins Analytical and analyzed for VPH and EPH using the 2016 Montana Method. Soil analytical results indicated no exceedances of the Tier 1 RBSLs.

On May 21 and May 22, 2018, EMR conducted a groundwater sampling event at MAF F-1 to evaluate the contaminant plume at the site. Analytical results from groundwater samples collected indicate that VPH and EPH compounds are present at concentrations exceeding the 2018 DEQ Tier 1 Risk Based Screening Levels (Appendix A).

Most Recent Groundwater Sampling Activities

On May 15, 2019, EMR conducted a groundwater sampling event at MAF F-1 to evaluate the contaminant plume at the site. Analytical results from groundwater samples collected indicate that VPH and EPH compounds are present at concentrations exceeding the 2018 DEQ Tier 1 Risk Based Screening Levels (Appendix A).

Upon arrival at the site, EMR collected groundwater level measurements (Table 1). Groundwater flow is generally to the SSE (Figure 2). Groundwater depths and the presence of groundwater in monitoring wells at the site is highly variable to significant subsurface disturbances during the installation of the MAF. The Air Force completed a simulated radius of influence study regarding the previous remedial injections. They concluded that the radius of influence for the injections was <10 feet and thus the water levels in MW-13 have not been impacted by previous injection events.

Low-flow sampling equipment included a bladder pump, a Horiba U-52 field water quality parameter measurement instrument with flow cell, and a Solinst water level meter. The Horiba U-52 was used to measure pH, oxygen reduction potential (ORP), dissolved oxygen (DO), conductivity, temperature, and turbidity (Table 2). The Solinst water level meter was used to measure water depths in each well. The bladder pump was lowered down the well to a depth below the static water level and in the upper fourth of the screened section and connected to disposable silicone tubing. A section of 0.25-inch LDPE tubing connected to the flow thru cell and the bladder pump. Water pumped from the wells was collected in 5-gallon buckets and then disposed of on the ground near the well at the completion of sampling in accordance with the DEQ Flowchart for Disposal of Hydrocarbon-Contaminated Wastewater (DEQ, 2015). Collection of groundwater samples occurred after purging and groundwater sampling parameters had stabilized in each well. The well was considered stabilized after a minimum of one well volume was purged and two consecutive readings of less than +/- 10% variance were recorded for temperature, conductivity, and consecutive pH readings were within 0.1 pH units. Groundwater sampling logs can be found in Appendix B. Water removed from the wells was discharged to the ground near the well in accordance with the DEQ Flow Chart for Discharge of Hydrocarbon-Contaminated Wastewater. Groundwater samples were collected and handled in accordance with the DEQ LUST/Brownfields sample collection, preservation, handling and shipping requirements. The samples were collected from MW-1, MW-2, MW-4, MW-5, MW-6, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, and MW-15. No free product was observed in MW-12.

May 2019 Groundwater Analytical Data

Groundwater samples and associated field QA/QC samples were submitted to Eurofins and analyzed for VPH and EPH using the 2018 Montana Modified Methods. This section will present the analytical data of all contaminants of concern from the May 2019 sampling event and provide a comparison to analytical data from previous sampling events. The historical VPH and EPH data is provide in Table 3. The VPH and EPH analytical data for May 2019 is depicted on Figures 3 and 4. Laboratory reports are provided in Appendix C.

Benzene

Benzene was detected above the 2018 DEQ Tier 1 Risk Based Screening Level (RBSL) of 5 micrograms per liter (µg/L) in monitoring wells MW-1 (1170 µg/L), MW-2 (1660 µg/L), MW-8 (21.7 µg/L), MW-9 (3370 µg/L), MW-10 (475 µg/L), MW-12 (459 µg/L), and MW-14 (13.1 µg/L). Benzene was not detected in downgradient wells MW-11, MW-13 or MW-15, nor in cross gradient wells MW-4, MW-6, and MW-7. Benzene was also non-detect in source area well MW-5. Detected benzene concentrations ranged from 13.1 µg/L (MW-14) to 3370 µg/L (MW-9). Benzene concentrations decreased in monitoring wells MW-1, MW-5, MW-10, MW-11, MW-14 and MW-15 and increased in MW-2, MW-8, MW-9, and MW-12 in comparison to 2018 data. While concentrations in MW-9 and MW-12 increased from 2018, they decreased from pre-remediation concentrations.

Toluene
Toluene was not detected above the 2018 DEQ Tier 1 RBSL of 1000 micrograms per liter (µg/L) in any of the monitoring wells sampled. Detected toluene concentrations ranged from 3 µg/L (MW-5) to 973 µg/L (MW-9). Toluene concentrations decreased in monitoring wells MW-5, MW-10, and MW-12 in comparison to the May 2018 data. Concentrations in MW-1, MW-2, and MW-9 increased from 2018, however, MW-1 and MW-9 decreased from pre-remediation concentrations.

Ethylbenzene
Ethylbenzene was detected above the 2018 DEQ Tier 1 RBSL of 700 micrograms per liter (µg/L) in monitoring wells MW-1 (1440 µg/L), MW-9 (1700 µg/L), and MW-12 (801 µg/L). Ethylbenzene was not detected in MW-4, MW-6, MW-7, MW-11 or MW-13. Detected ethylbenzene concentrations ranged from 3.8 µg/L (MW-8) to 1700 µg/L (MW-9). Ethylbenzene concentrations decreased in monitoring wells MW-5, MW-10, MW-12, MW-14, and MW-15, while increases were noted in MW-1, MW-2, and MW-9 in comparison to the May 2018 data. While concentrations increased from 2018, they decreased from pre-remediation concentrations in monitoring wells MW-1 and MW-12.

Xylenes
Xylenes were not detected above the 2018 DEQ Tier 1 RBSL of 10000 micrograms per liter (µg/L) in any monitoring wells. Xylenes were not detected in downgradient well MW-13, or in cross gradient wells MW-4, MW-6, MW-7, MW-8 and MW-11.

Naphthalene
Naphthalene was detected above the 2018 DEQ Tier 1 RBSL of 100 micrograms per liter (µg/L) in monitoring wells MW-1 (619 µg/L), MW-2 (226 µg/L), MW-9 (444 µg/L), MW-10 (160 µg/L), and MW-12 (463 µg/L). Naphthalene was not detected in monitoring wells MW-4, MW-5 MW-6, MW-7, MW-11, MW-13, and MW-14. Detected naphthalene concentrations ranged from 3.25 µg/L (MW-8) to 619 µg/L (MW-1). Naphthalene concentrations decreased in monitoring wells MW-5, MW-10, MW-11, MW-12, and MW-15, while monitoring wells MW-1, MW-2, and MW-9 showed increases in comparison to 2018 concentrations.

Methyl Tert-Butyl Ether (MTBE)
MTBE was not detected above the 2018 DEQ Tier 1 RBSL of 30 micrograms per liter (µg/L) in any monitoring wells. The only detection of MTBE was in MW-6 at 6.99 µg/L.

C5-C8 Aliphatic Hydrocarbons
C5-C8 Aliphatic Hydrocarbons were detected above the 2018 DEQ Tier 1 RBSL of 650 micrograms per liter (µg/L) in monitoring wells MW-1(7990 µg/L), MW-2 (2780 µg/L), MW-9 (12400 µg/L), MW-10 (1490 µg/L), MW-12 (4780 µg/L), and MW-15 (1220 µg/L). C5-C8 Aliphatics were not detected monitoring wells MW-4, MW-6, MW-7, MW-11, and MW-13. Detected C5-C8 Aliphatic concentrations ranged from 117 µg/L (MW-5) to 12400 µg/L (MW-9). C5-C8 Aliphatic Hydrocarbon concentrations decreased in MW-, MW-12, and MW-14.

C9-C12 Aliphatic Hydrocarbons
C9-C12 Aliphatic Hydrocarbons were detected above the 2018 DEQ Tier 1 RBSL of 1400 micrograms per liter (µg/L) in monitoring wells MW-1 (10100 µg/L), MW-2 (3030 µg/L), MW-9 (8450 µg/L), and MW-12 (6090 µg/L). C9-C12 Aliphatics were not detected in monitoring wells MW-4, MW-6, MW-7, MW-8, MW-11 and MW-13. Detected C9-C12 Aliphatic concentrations ranged from 57 µg/L (MW-5) to 10100 µg/L (MW-1). C5-C8 Aliphatic Hydrocarbon concentrations decreased in all monitoring wells with the exception of MW-1, MW-2, and MW-9.

C9-C10 Aromatic Hydrocarbons
C9-C10 Aromatic Hydrocarbons were detected above the 2018 DEQ Tier 1 RBSL of 1100 micrograms per liter (µg/L) in monitoring wells MW-1 (7700 µg/L), MW-2 (2010 µg/L), MW-9 (5650 µg/L), MW-10 (1480 µg/L), MW-12 (8050 µg/L), and MW-15 (1750 µg/L). C9-C10 Aromatic Hydrocarbons were not detected

in monitoring wells MW-4, MW-6, MW-7, MW-11, and MW-13. Detected C9-C10 Aromatic Hydrocarbon concentrations ranged from 76 µg/L (MW-5) to 8050 µg/L (MW-12). C9-C10 Aromatic concentrations increased in monitoring wells MW-1, MW-2, and MW-9 when compared to May 2018 data. While in comparison to May 2018 data MW-9 shows an increase in concentration, is shows a decrease in concentration when compared to pre-remediation data.

EPH Screen and Fractionation Data

TEH screening concentrations exceeded 1000 µg/L in monitoring wells MW-1, MW-2, MW-9, MW-10, MW-12, and MW-15. For wells with an EPH screening level above 1000 µg/L, fractionation of the data was completed. The results of sample fractionations indicate exceedances of the 2018 Tier 1 RBSLs only in monitoring wells MW-1 and MW-12. As with previous data, EMR cannot provide an explanation for high concentrations of C9-C18 Aliphatics and C11 to C22 Aromatics in MW-12, when they are not detected or below the Tier 1 RBSLs in upgradient monitoring wells MW-2, MW-5, MW-8, MW-9, and MW-10.

Data Verification and Validation

The analysis of groundwater samples collected during this investigation followed the proposed methodologies presented in the *Final Corrective Action and Remedial Alternative Analysis for Missile Alert Facility (MAF) F-1 (PL507) Augusta, Lewis & Clark County, Montana*, dated January 8, 2015.

All groundwater samples were analyzed in various combinations for the following:

- VPH and EPH by Montana Modified Method (2018)

All the laboratory data generated as part of the investigation conducted at MAF F-1 was validated by the project chemist. Internal laboratory quality assurance (QA)/quality control (QC) samples, including a trip blank and field duplicate were performed to document laboratory QA/QC.

The data validation report noted that the Chain of Custody record(s) from the field to the laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. All analyses are accounted for in the data report. There is no indication of any issues associated with the sample receipt, and/or condition of the samples, that would affect the quality of the data.

None of the quality control excursions encountered during the data assessment process of this analytical data set resulted in rejected data. In terms of data quality, all data met requested validation DQOs except as noted and is therefore considered compliant and adequate for use. Information regarding the precision, accuracy, representativeness and completeness is provided in the Validation Report (Appendix D).

Data Evaluation

Overall, remedial activities completed in 2015 and 2017 (MW-12) have resulted in decreases in contaminant concentrations in all monitoring wells. In MW-5 contaminant concentrations for all compounds have been reduced by 91 to 100%, with all contaminants below the RBSLs. The contaminant reductions in this well likely correlate to successful injection of in-situ enhanced bioremediation products in RW-1 in comparison to the other remediation wells.

Overall Decreases/Increases in COCs – 2014 to 2019 (all concentrations in µg/L)

	MW-1					**Decrease/Increase**
	Mar-14	Apr-16	Apr-17	May-18	May-19	
C5-C8 Aliphatics	**7850**	**3630**	**15600**	**7720**	**7990**	+1.7%

Note: **Exceedances of the 2018 Tier 1 RBSLs are shown in bold.**

Currently, EMR does not have an explanation for the past significant increases in contaminant concentrations reported in MW-12. MW-10, located upgradient of MW-12 and between wells MW-12 and MW-9, has historically had much lower contaminant concentrations than MW-12 and MW-9. . Groundwater collected from MW-14 and MW-15 reported VPH concentrations significantly lower than MW-12, but exceeding the 2018 Tier 1 RBSLs, indicating that the contaminant plume has not migrated much beyond MW-12. The plume is still delineated and isolated mainly to the entrance road area that was excavated to depths of up to 60 feet during the installation of the MAF; as monitoring wells MW-4, MW-5, MW-6, MW-7, MW-11 and MW-13 are not impacted.

Discussion and Recommendations

The May 2019 groundwater sampling event was the final sampling event under the current contract. Due to budget and time constraints of our AFCEC contract, the performance objective of Site Closeout will not be met. No additional activities will be conducted at TU507 (MAF F-1) during the existing contract that ends in September 2020.

If you have questions or comments, please contact me at (913) 232-7788, ext. 101.

Sincerely,

J. A. Humenik

NE - Remediation Level not available
1004 Exceeds EPH Screen of 1000 ug/L
5.0 Exceeds RBSL
<1.3 RBSL is lower then lab MDL
CCE - Analyte concentration is flagged as estimated due to exceeding the calibration range or interferences.
TEH - Total Extractable Hydrocarbon concentraiton exceeds criteria additional analysis (fractionation) is needed.
E - This flag indicates the concentration for this analyte is an estimated alue due to exceeding the calibration range or interferences resulting in a biased final concentration.
U - Analyte included in the analysis, but not detected at or above the MDL.
J - Detected above the Method Detection Limit but below the Reporting Limit; therefore, result is an estimated concentration.
J4 - The associated batch QC was outside the established quality control range for accuracy
NA - Not Analyzed
Remedial Injections were completed between June 8, 2015 and October 27, 2015.
Data compared to the May 2018 DEQ Tier 1 RBSLs
Note: Data from the 8/25/15 sampling groundwater sampling event have been qualified as estimates (J) and biased low because the sample temperatures at time of analysis exceeded EPA recommendations.

APPENDIX A

Montana DEQ RBSLs

TABLE 3
TIER 1 GROUNDWATER RBSLs AND STANDARDS

This table applies to groundwater and consists of DEQ-7 Human Health Standards (HHSs; DEQ 2012), where available. For compounds without DEQ-7 HHSs, DEQ has developed RBSLs and included them in the table. For EPH compounds, a total extractable hydrocarbon (TEH) concentration of 1,000 µg/L is used to determine if additional analysis (fractionation) is needed. Surface water impacts require a minimum of a Tier 2 evaluation.

Chemical	Effect	Basis	Groundwater Standard or RBSL (µg/l)
For Gasoline and Light Hydrocarbons measured using the Massachusetts Method for Volatile Petroleum Hydrocarbons (VPH)			
C5-C8 Aliphatics [(b)]	n	rb	650
C9-C12 Aliphatics[(b)]	n	rb	1,400
C9-C10 Aromatics[(b)]	n	rb	1,100

1-Methylnaphthalene	c	rsl	11
2-Methylnaphthalene	n	rsl	36

Notes: (a) = An exceedance of the 1,000 µg/l EPH/TEH screen value indicates only that fractionation is required. If none of the fractions exceed, then the EPH/TEH value does not need to be identified as a COPC exceeding RBSLs.

(b) = The fraction surrogate (for modeling purposes) uses a representative compound with a mid range Equivalent Carbon Number (Massachusetts DEP 2002 Table 4-14). This number doesn't take into account the higher molecular weight compounds that have higher solubilities than the fraction surrogate therefore underestimating the overall solubility of the fraction.

Effect is either: n = non-carcinogenic RBSLs and RSLs are based on a hazard quotient of 1, or
c = carcinogenic RBSLs and RSLs are based on a cancer risk $1X10^{-5}$.

Basis is: rb = risk-based screening level;
hhs = DEQ-7 Human Health Standard (DEQ, October 2012. Circular DEQ-7 Montana Numeric Water Quality Standards); or
rsl = tapwater risk-based screening level based upon TR of 1E-05 and THQ of 1.0 consistent with DEQ-7
bu = adversely affects beneficial uses (foul taste or odor).
* = The best achievable practical quantitation limit (0.1 µg/L) may be greater than the human health standard; therefore, if the compound is detected, additional evaluation may be necessary.

The RBSLs for soil and water are not designed to be protective of the vapor intrusion (VI) pathway. Please refer to the Vapor Intrusion to Indoor Air Section of the Montana Risk-Based Corrective Action Guidance for Petroleum Releases.

General Comments:

All analyses have been performed in accordance with DOD QSM Version 5.1.1 unless otherwise noted below.

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.
Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

MA DEP VPH, Rev. 2.1 2/2018, GC Petroleum Hydrocarbons

Sample #s: 1059988, 1059989, 1059994

The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

Sample #s: 1059991

The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

Sample #s: 1059993

The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

Sample #s: 1059983, 1059984, 1059987

The recovery for a target analyte(s) in the Laboratory Control

Spike(s) is outside the QC acceptance limits as noted on the QC Summary. The client was contacted and the data reported.

Batch #: 19142B08A (Sample number(s): 1059979-1059982)

The recovery(ies) for one or more surrogates exceeded the acceptance window indicating a positive bias for sample(s) 1059980, 1059980DL, 1059981

Batch #: 19143B08A (Sample number(s): 1059983-1059984, 1059987-1059989, 1059991, 1059993-1059994)

The recovery(ies) for the following analyte(s) in the LCS and/or LCSD were below the acceptance window: C9-C12 Aliphatic Hydrocarbons

The recovery(ies) for one or more surrogates exceeded the acceptance window indicating a positive bias for sample(s) 1059988, 1059989, 1059991, 1059993, 1059994, 1059994DL

MA EPH 5/04, GC Petroleum Hydrocarbons

Sample #s: 1059980, 1059981, 1059988, 1059989, 1059994

The recovery for a target analyte(s)and surrogate(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

Sample #s: 1059993

The recovery for a target analyte(s)and surrogate(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

The following analytes were manually integrated:
C11 to C22 Aromatics, Unadjusted C11 - C22 Aromatics

Batch #: 191510004A (Sample number(s): 1059980-1059981, 1059988-1059989, 1059993-1059994)

The recovery(ies) for the following analyte(s) in the LCS and/or LCSD were below the acceptance window: Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene, 2-Methylnaphthalene, C9 to C18 Aliphatics, Unadjusted C11 - C22 Aromatics

The relative percent difference(s) for the following analyte(s) in the LCS/LCSD were outside acceptance windows: Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene, 2-Methylnaphthalene, C9 to C18 Aliphatics, C19 to C36 Aliphatics, Unadjusted C11 - C22 Aromatics

The recovery(ies) for one or more surrogates were below the acceptance window for sample(s) LCS

MT DEQ, GC Petroleum Hydrocarbons

Sample #s: 1059981, 1059982, 1059983, 1059984, 1059985

The following analytes were manually integrated:
MTEPH Screen Water

Sample #s: 1059986

The recovery for the sample surrogate(s) is outside the QC acceptance limits as noted on the QC Summary.

Sample #s: 1059987, 1059990, 1059991, 1059992, 1059993

2425 New Holland Pike, Lancaster, PA 17601 • 717-656-2300 • Fax: 717-656-6766 • www.EurofinsUS.com/LancLabsEnv

The response for a target analyte(s) in the continuing calibration verification standard is outside the QC acceptance limits high. The following action was taken:
The analysis was repeated and the continuing calibration verification standard bracketing the sample on the second trial is also outside the acceptance limits high. This effect is attributed to the sample matrix and the data is reported.

Sample #s: 1059980, 1059988, 1059989, 1059994

The response for a target analyte(s) in the continuing calibration verification standard is outside the QC acceptance limits high. The following action was taken:
The analysis was repeated and the continuing calibration verification standard bracketing the sample on the second trial is also outside the acceptance limits high. This effect is attributed to the sample matrix and the data is reported.

The following analytes were manually integrated:
MTEPH Screen Water

Batch #: 191420017A (Sample number(s): 1059980-1059994)

The recovery(ies) for one or more surrogates exceeded the acceptance window indicating a positive bias for sample(s) LCS, LCSD

The recovery(ies) for one or more surrogates were below the acceptance window for sample(s) 1059986

The recovery for a target analyte(s)and surrogate(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

GC Petroleum Hydrocarbons	**MT DEQ**		**ug/l**	**ug/l**	**ug/l**	**ug/l**	**ug/l**	
05968	MTEPH Screen Water	n.a.	65,000 E	300	300	300	1000	1

The response for a target analyte(s) in the continuing calibration verification standard is outside the QC acceptance limits high. The following action was taken:
The analysis was repeated and the continuing calibration verification standard bracketing the sample on the second trial is also outside the acceptance limits high. This effect is attributed to the sample matrix and the data is reported.

The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. The client was contacted and the data reported.

GC Petroleum Hydrocarbons	**MT DEQ**		**ug/l**		**ug/l**	**ug/l**	**ug/l**	**ug/l**	
05968	MTEPH Screen Water	n.a.	N.D.		300	300	300	1000	1

The response for a target analyte(s) in the continuing calibration verification standard is outside the QC acceptance limits high. The following action was taken:
The analysis was repeated and the continuing calibration verification standard bracketing the sample on the second trial is also outside the acceptance limits high. This effect is attributed to the sample matrix and the data is reported.

05331	Pyrene	129-00-0	N.D.		49	97	120		10

The recovery for a target analyte(s)and surrogate(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Sufficient sample was not available to repeat the analysis.

CAT No.	Analysis Name	CAS Number	Result		Detection Limit*	Limit of Detection	Limit of Quantitation	Action Limit	DF
GC Petroleum Hydrocarbons	**MT DEQ**		**ug/l**		**ug/l**	**ug/l**	**ug/l**	**ug/l**	
05968	MTEPH Screen Water	n.a.	13,000	E	300	300	300	1000	1

The response for a target analyte(s) in the continuing calibration verification standard is outside the QC acceptance limits high. The following action was taken:
The analysis was repeated and the continuing calibration verification standard bracketing the sample on the second trial is also outside the acceptance limits high. This effect is attributed to the sample matrix and the data is reported.

Quality Control Summary

Client Name: EMR Environmental
Reported: 08/06/2019 09:51

Group Number: 2044467

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

SUBJECT: Malmstrom AFB, Data Validation

Dear Ms. Adkisson

Enclosed are the final validation reports for the fractions listed below. This SDG was received on June 17, 2019. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #45300:

SDG #	Fraction
EMR07/2044467	Volatile Petroleum Hydrocarbons, Extractable Petroleum Hydrocarbons

The data validation was performed under Level II guidelines. The analyses were validated using the following documents, as applicable to each method:

- Uniform Federal Policy Quality Assurance Project Plan for Remedial Investigation Corrective Action Plan, Malmstrom Air Force Base Petroleum Site: TU1082, TU455, TU465, TU469, and LF D-04, Malmstrom Air Force Base, Montana; September 2017
- USEPA National Functional Guidelines for Organic Superfund Methods Data Review; January 2017
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; update IV, February 2007; update V, July 2014

Please feel free to contact us if you have any questions.

Sincerely,

Christina Rink

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Uniform Federal Policy Quality Assurance Project Plan for Remedial Investigation Corrective Action Plan, Malmstrom Air Force Base Petroleum Sites: TU1082, TU455, TU465, TU469, and LF D-04, Malmstrom Air Force Base, Montana (September 2017) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Volatile Petroleum Hydrocarbons (VPH) by MA VPH

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered not detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks with the following exceptions:

Blank ID	Analysis Date	Compound	Concentration	Associated Samples
19148B08A-MB	05/28/19	C5-C8 Aliphatic hydrocarbons Unadjusted C5-C8 aliphatics	313 ug/L 313 ug/L	MW-6 MW-7 MW-11 MW-13

Sample concentrations were compared to concentrations detected in the laboratory blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated laboratory blanks.

V. Field Blanks

Sample TB was identified as a trip blank. No contaminants were found.

VI. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Sample	Surrogate	%R (Limits)	Affected Compound	Flag	A or P
MW-1	Trifluorotoluene-P Trifluorotoluene-F	394 (70-130) 635 (70-130)	Methyl-tert-butyl ether	NA	-

Sample	Surrogate	%R (Limits)	Affected Compound	Flag	A or P
MW-2	Trifluorotoluene-P Trifluorotoluene-F	154 (70-130) 164 (70-130)	Methyl-tert-butyl ether	NA	-
MW-2	Trifluorotoluene-P Trifluorotoluene-F	154 (70-130) 164 (70-130)	Naphthalene	J (all detects)	A
MW-9	Trifluorotoluene-P Trifluorotoluene-F	149 (70-130) 213 (70-130)	Methyl-tert-butyl ether	NA	-
MW-9	Trifluorotoluene-P Trifluorotoluene-F	149 (70-130) 213 (70-130)	Naphthalene	J (all detects)	A
MW-10	Trifluorotoluene-P Trifluorotoluene-F	192 (70-130) 294 (70-130)	Methyl-tert-butyl ether	NA	-
MW-10	Trifluorotoluene-P Trifluorotoluene-F	192 (70-130) 294 (70-130)	Naphthalene Toluene o-Xylene m,p-Xylene	J (all detects) J (all detects) J (all detects) J (all detects)	A
MW-14	Trifluorotoluene-P Trifluorotoluene-F	170 (70-130) 258 (70-130)	All compounds	J (all detects)	P
MW-15	Trifluorotoluene-P Trifluorotoluene-F	190 (70-130) 312 (70-130)	All compounds	J (all detects)	P
MW-12	Trifluorotoluene-P Trifluorotoluene-F	563 (70-130) 1097 (70-130)	Methyl-tert-butyl ether	NA	-
MW-12	Trifluorotoluene-P Trifluorotoluene-F	563 (70-130) 1097 (70-130)	Toluene	J (all detects)	A
MW-1	Trifluorotoluene-F	136 (70-130)	Ethylbenzene Naphthalene Toluene o-Xylene m,p-Xylene C5-C8 Aliphatic hydrocarbons Unadjusted C5-C8 aliphatics C9-C10 Aromatic hydrocarbons C9-C12 Aliphatic hydrocarbons Unadjusted C9-C12 aliphatics	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A
MW-12	Trifluorotoluene-P Trifluorotoluene-F	135 (70-130) 183 (70-130)	Ethylbenzene Naphthalene o-Xylene m,p-Xylene C5-C8 Aliphatic hydrocarbons Unadjusted C5-C8 aliphatics C9-C10 Aromatic hydrocarbons C9-C12 Aliphatic hydrocarbons Unadjusted C9-C12 aliphatics	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
19143B08A-LCS/D (MW-5 MW-5D MW-8 MW-9 MW-10 MW-14 MW-15 MW-12)	C9-C12 aliphatic hydrocarbons	66 (70-130)	65 (70-130)	J (all detects) UJ (all non-detects)	P

Relative percent differences (RPD) were within QC limits.

IX. Field Duplicates

Samples MW-5 and MW-5D were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/L)		RPD (Limits)	Flag	A or P
	MW-1R	MW-1RD			
C5-C8 Aliphatic hydrocarbons	117	109	7 (≤20)	-	-
Unadjusted C5-C8 aliphatics	120	114	5 (≤20)	-	-
C9-C10 Aromatic hydrocarbons	76.2	85.7	12 (≤20)	-	-
C9-C12 Aliphatic hydrocarbons	56.5	62.1	9 (≤20)	-	-
Unadjusted C9-C12 aliphatics	158	177	11 (≤20)	-	-
Ethylbenzene	4.39	4.88	11 (≤20)	-	-
Toluene	3.03	3.43	12 (≤20)	-	-
o-Xylene	5.27	6.08	14 (≤20)	-	-

Compound	Concentration (ug/L)		RPD (Limits)	Flag	A or P
	MW-1R	MW-1RD			
m,p-Xylene	15.2	17.7	15 (≤20)	-	-
Benzene	4.00U	2.20	58 (≤20)	NQ	-

NQ = One or both results were less than the limit of quantitation (LOQ), therefore no data were qualified.

X. Compound Quantitation

Raw data were not reviewed for Level II validation.

XI. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XII. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to surrogate %R and LCS/LCSD %R, data were qualified as estimated in ten samples.

No results were rejected in this SDG.

Sample Identification	Laboratory Sample Identification	Matrix	Collection Date
MW-1	1059980	Water	05/15/19
MW-2	1059981	Water	05/15/19
MW-9	1059988	Water	05/15/19
MW-10	1059989	Water	05/15/19
MW-15	1059993	Water	05/15/19
MW-12	1059994	Water	05/15/19

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Uniform Federal Policy Quality Assurance Project Plan for Remedial Investigation Corrective Action Plan, Malmstrom Air Force Base Petroleum Sites: TU1082, TU455, TU465, TU469, and LF D-04, Malmstrom Air Force Base, Montana (September 2017) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Extractable Petroleum Hydrocarbons by MA EPH

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered not detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	LCS %R (Limits)	LCSD %R (Limits)	Flag	A or P
191510004A-LCS/D (MW-1 MW-2 MW-9 MW-10 MW-15 MW-12)	Acenaphthene	33 (40-140)	-	J (all detects) UJ (all non-detects)	P
	Acenaphthylene	34 (40-140)	-		
	Anthracene	37 (40-140)	-		
	Benzo(a)anthracene	38 (40-140)	-		
	Benzo(a)pyrene	36 (40-140)	-		
	Benzo(b)fluoranthene	39 (40-140)	-		
	Benzo(g,h,i)perylene	38 (40-140)	-		
	Benzo(k)fluoranthene	37 (40-140)	-		
	Unadjusted C11-C22 aromatics	37 (40-140)	-		
	C9-C18 aliphatics	32 (40-140)	-		
	Chrysene	38 (40-140)	-		
	Dibenzo(a,h)anthracene	37 (40-140)	-		
	Fluoranthene	38 (40-140)	-		
	Fluorene	35 (40-140)	-		
	Indeno(1,2,3-cd)pyrene	38 (40-140)	-		
	2-Methylnaphthalene	30 (40-140)	-		
	Naphthalene	30 (40-140)	-		
	Phenanthrene	36 (40-140)	-		

Relative percent differences (RPD) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
191510004A-LCS/D (MW-1 MW-2 MW-9 MW-10 MW-15 MW-12)	Acenaphthene	52 (≤25)	J (all detects) UJ (all non-detects)	P
	Acenaphthylene	51 (≤25)		
	Anthracene	51 (≤25)		
	Benzo(a)anthracene	51 (≤25)		
	Benzo(a)pyrene	49 (≤25)		
	Benzo(b)fluoranthene	52 (≤25)		
	Benzo(g,h,i)perylene	51 (≤25)		
	Benzo(k)fluoranthene	49 (≤25)		
	Unadjusted C11-C22 aromatics	50 (≤25)		
	C19-C36 aliphatics	59 (≤25)		
	C9-C18 aliphatics	52 (≤25)		
	Chrysene	46 (≤25)		
	Dibenzo(a,h)anthracene	49 (≤25)		
	Fluoranthene	51 (≤25)		
	Fluorene	52 (≤25)		
	Indeno(1,2,3-cd)pyrene	51 (≤25)		
	2-Methylnaphthalene	50 (≤25)		
	Naphthalene	48 (≤25)		
	Phenanthrene	52 (≤25)		
	Pyrene	52 (≤25)		

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Compound Quantitation

Raw data were not reviewed for Level II validation.

XI. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XII. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to LCS/LCSD %R and RPD, data were qualified as estimated in six samples.

No results were rejected in this SDG.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Uniform Federal Policy Quality Assurance Project Plan for Remedial Investigation Corrective Action Plan, Malmstrom Air Force Base Petroleum Sites: TU1082, TU455, TU465, TU469, and LF D-04, Malmstrom Air Force Base, Montana (September 2017) and a modified outline of the USEPA National Functional Guidelines (NFG) for Organic Superfund Methods Data Review (January 2017). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Extractable Petroleum Hydrocarbons by MTEPH Screen

All sample results were subjected to Level II data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers utilized during data validation:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered not detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. Initial Calibration and Initial Calibration Verification

Initial calibration data were not reviewed for Level II validation.

III. Continuing Calibration

Continuing calibration data were not reviewed for Level II validation.

IV. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks.

V. Field Blanks

No field blanks were identified in this SDG.

VI. Surrogates

Surrogates were added to all samples as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Sample	Surrogate	%R (Limits)	Affected Compound	Flag	A or P
MW-7	Ortho-terphenyl 1-chloro-octadecane	31 (40-140) 25 (40-140)	MTEPH screen water	J (all detects) UJ (all non-detects)	P

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

IX. Field Duplicates

Samples MW-5 and MW-5D were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

Compound	Concentration (ug/L)		RPD (Limits)	Flag	A or P
	MW-5	MW-5D			
MTEPH screen water	460	430	7 (≤20)	-	-

X. Compound Quantitation

All compound quantitations met validation criteria with the following exceptions:

Sample	Compound	Finding	Criteria	Flag	A or P
MW-1 MW-2 MW-9 MW-10 MW-12	MTEPH screen water	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A

Raw data were not reviewed for Level II validation.

XI. Target Compound Identifications

Raw data were not reviewed for Level II validation.

XII. Overall Assessment of Data

The analysis was conducted within all specifications of the method.

Due to surrogate %R and results exceeding calibration range, data were qualified as estimated in six samples.

No results were rejected in this SDG.
